

## Portfolio Manager

Steve Mullen, USMC

**Public Safety Systems (PSS)** acquires and sustains emergency management capabilities aboard United States Marine Corps (USMC) Installations, providing interoperable, secure, reliable, survivable, and versatile wireless communications networks solutions for Emergency Management communications. Additionally, PSS provides solutions to enable command and coordination dispatch functions for Marine Corps Emergency First Responders, supporting day-to-day emergency operations.

## PSS Portfolio

**Consolidated Emergency Response Systems (CERS)** - CERS provides command and coordination dispatch functions for first responders to support emergency management missions on Marine Corps installations while also supporting civilian mutual aid partners. CERS also standardizes dispatch centers to provide notification functions, resource management, and situational awareness to increase efficient emergency and day-to-day first responder operations.

**Enterprise Land Mobile Radio (E-LMR)** - E-LMR provides interoperable, secure, reliable, survivable, versatile wireless communications network solutions for Emergency Management and emergency management communications. E-LMR provides modern, digital, Association of Public Safety Communications Officials Project 25 (APCO P25) Phase II Trunked radio system at all Marine Corps Installations.

**Public Safety Network (PSNet)** - PSNet is a closed network that is owned and managed by Commander Naval Installations Command (CNIC) N6. The network leverages existing transport capabilities within the Department of the Navy for operational centers that dispatch, monitor and support emergency services personnel and equipment in all types of emergency situations.
